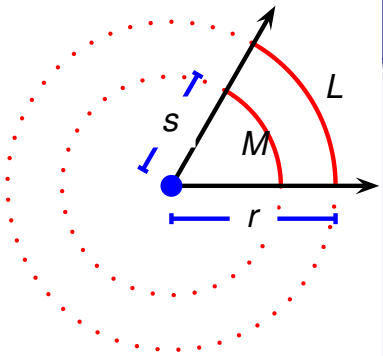
Precalculus
Find circle arclength from radius and angle

Todor Milev

2019

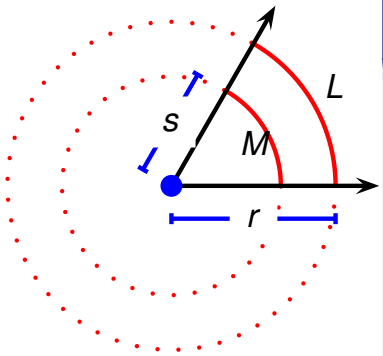
Arc-length of a circle arc



Proposition

Let two circles have common center and radii s and r. Suppose an arbitrary geometric angle with vertex at the common center of the circles cuts off short arcs of length M and L. Then $\frac{s}{r} = \frac{M}{L}$.

Arc-length of a circle arc

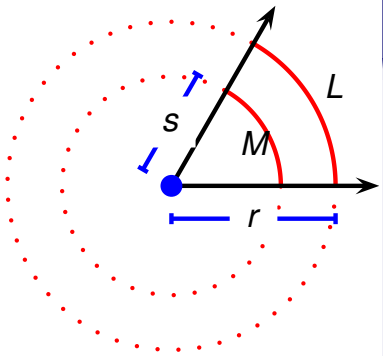


Proposition

Let two circles have common center and radii s and r. Suppose an arbitrary geometric angle with vertex at the common center of the circles cuts off short arcs of length M and L. Then $\frac{s}{r} = \frac{M}{L}$.

$$\frac{s}{r} = \frac{M}{L}$$

Arc-length of a circle arc

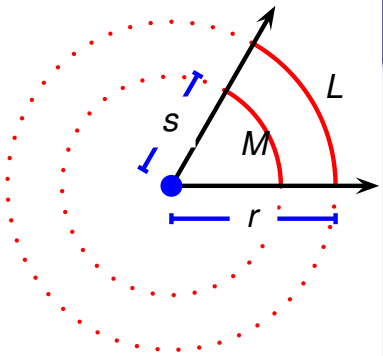


Proposition

Let two circles have common center and radii s and r. Suppose an arbitrary geometric angle with vertex at the common center of the circles cuts off short arcs of length M and L. Then $\frac{s}{r} = \frac{M}{L}$.

$$\begin{array}{rcl} \frac{s}{r} & = & \frac{M}{L} \\ \frac{1}{r} & = & \frac{\alpha}{L} \end{array} \quad \Big| \quad \text{Choose } s = 1, \text{ relabel } M = \alpha$$

Arc-length of a circle arc

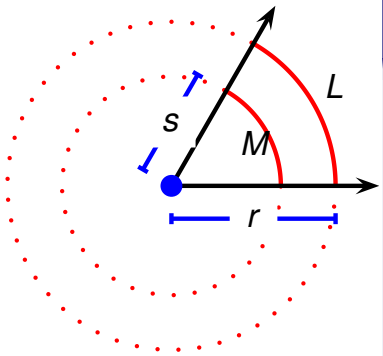


Proposition

Let two circles have common center and radii s and r. Suppose an arbitrary geometric angle with vertex at the common center of the circles cuts off short arcs of length M and L. Then $\frac{s}{r} = \frac{M}{L}$.

$$\begin{aligned} \frac{s}{r} &= \frac{M}{L} \\ \frac{1}{r} &= \frac{\alpha}{L} \end{aligned} \quad \Big| \quad \text{Choose } s = 1, \text{ relabel } M = \alpha$$

Arc-length of a circle arc



Proposition

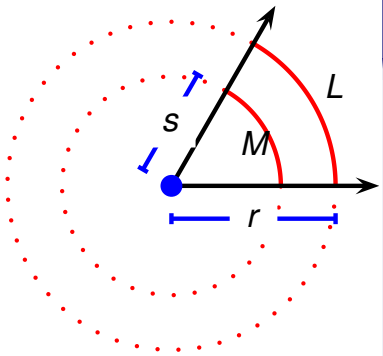
$$\begin{array}{rcl} \frac{s}{r} & = & \frac{M}{L} \\ \frac{1}{r} & = & \frac{\alpha}{L} \\ L & = & \alpha r \end{array} \quad \Big| \quad \text{Choose } s = 1, \text{ relabel } M = \alpha$$

Arc-length of a circle arc



Proposition

Let two circles have common center and radii s and r. Suppose an arbitrary geometric angle with vertex at the common center of the circles cuts off short arcs of length M and L. Then $\frac{s}{r} = \frac{M}{L}$.

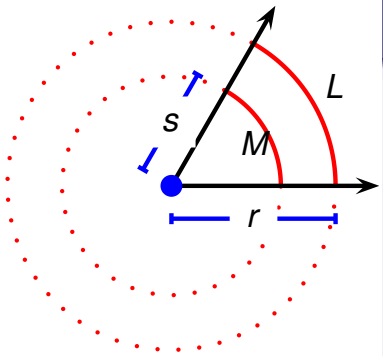
$$\begin{array}{rcl} \frac{s}{r} & = & \frac{M}{L} \\ \frac{1}{r} & = & \frac{\alpha}{L} \\ L & = & \alpha r \end{array} \quad \Big| \text{ Choose } s = 1, \text{ relabel } M = \alpha$$

The angle-measure of a geometric angle is the arc-length cut off from a radius 1 circle, therefore we get the following.

Arc-length of a circle arc

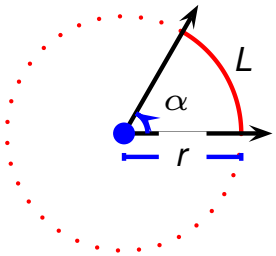


Proposition

Let two circles have common center and radii s and r. Suppose an arbitrary geometric angle with vertex at the common center of the circles cuts off short arcs of length M and L. Then $\frac{s}{r} = \frac{M}{L}$.

$$\begin{array}{rcl} \frac{s}{r} & = & \frac{M}{L} \\ \frac{1}{r} & = & \frac{\alpha}{L} \\ L & = & \alpha r \end{array} \quad \Big| \quad \text{Choose } s = 1, \text{ relabel } M = \alpha$$

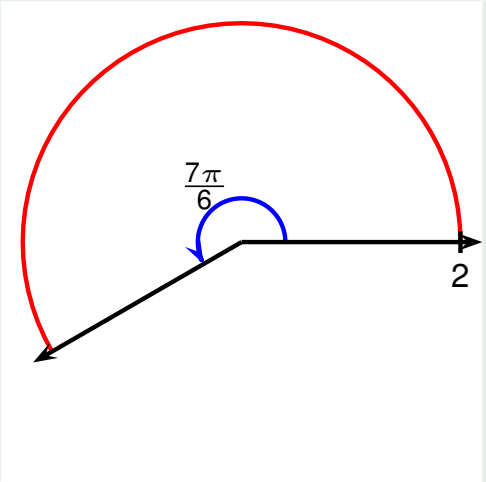
The angle-measure of a geometric angle is the arc-length cut off from a radius 1 circle, therefore we get the following.



Corollary

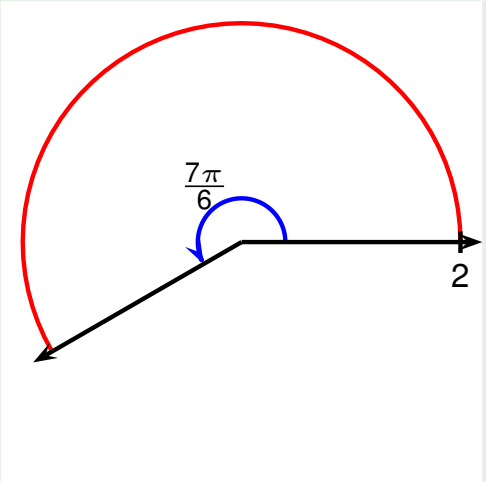
The arc-length cut off by an angle with measure α from a circle of radius r equals αr.

Example



Find the length of an arc of a circle of radius 2 cut off by an angle of measure $\frac{7\pi}{6}$ $(= 210°)$.

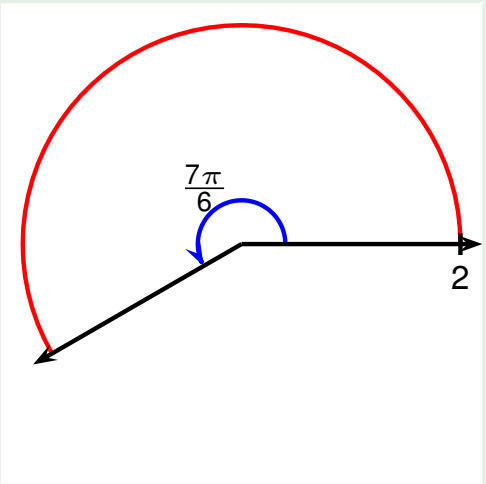
Example



Find the length of an arc of a circle of radius 2 cut off by an angle of measure $\frac{7\pi}{6}$ $(= 210°)$.

arc-length $= \alpha r$

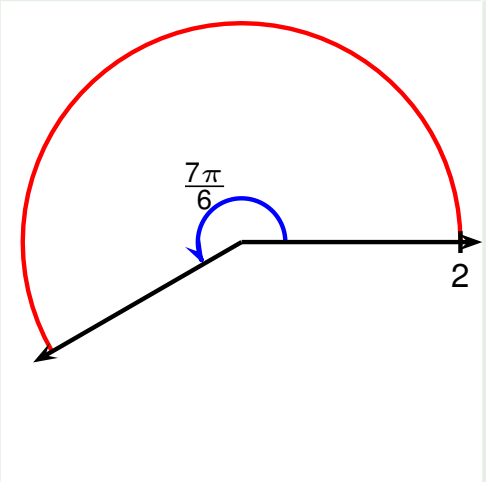
Example



Find the length of an arc of a circle of radius 2 cut off by an angle of measure $\frac{7\pi}{6}$ $(= 210°)$.

$$\text{arc-length} = \alpha r = \frac{7\pi}{6} \cdot 2$$

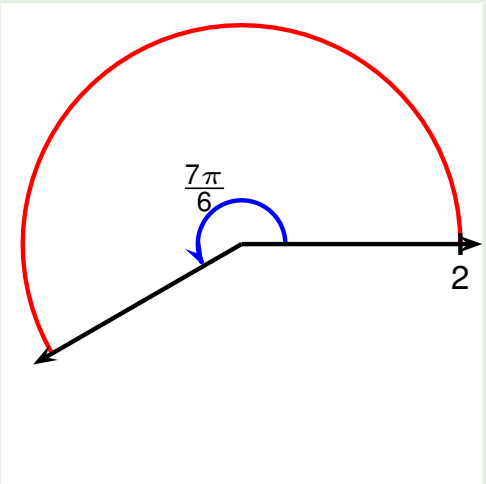
Example



Find the length of an arc of a circle of radius 2 cut off by an angle of measure $\frac{7\pi}{6}$ $(= 210°)$.

$$\text{arc-length} = \alpha r = \frac{7\pi}{6} \cdot 2$$

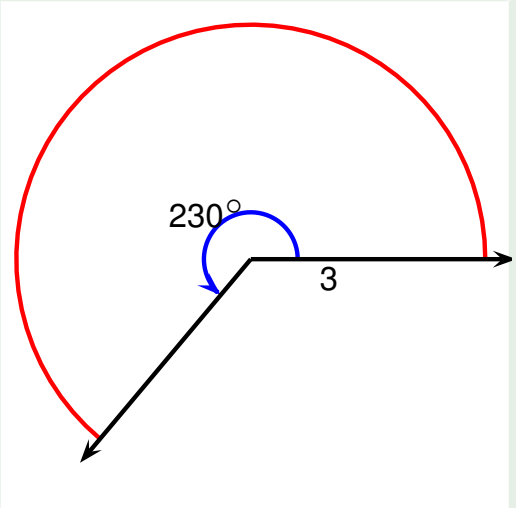
Example



Find the length of an arc of a circle of radius 2 cut off by an angle of measure $\frac{7\pi}{6}$ $(= 210^\circ)$.

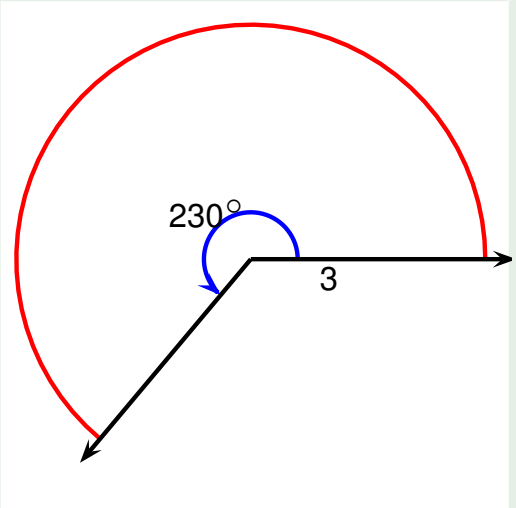
$$\text{arc-length} = \alpha r = \frac{7\pi}{6} \cdot 2 = \frac{7\pi}{3} \approx 7.33038 \text{ (units)}$$

Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

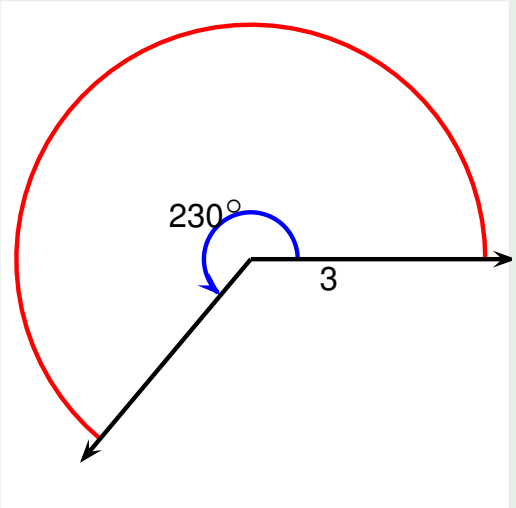
Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

arc-length $= \alpha r$

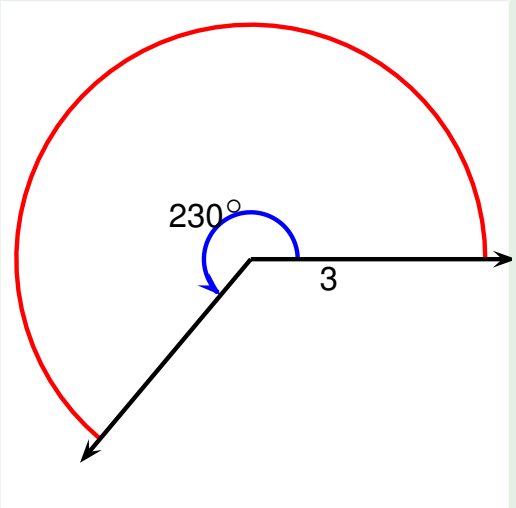
Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

arc-length $=$ $\alpha r = ?$ $\cdot 3$

Example

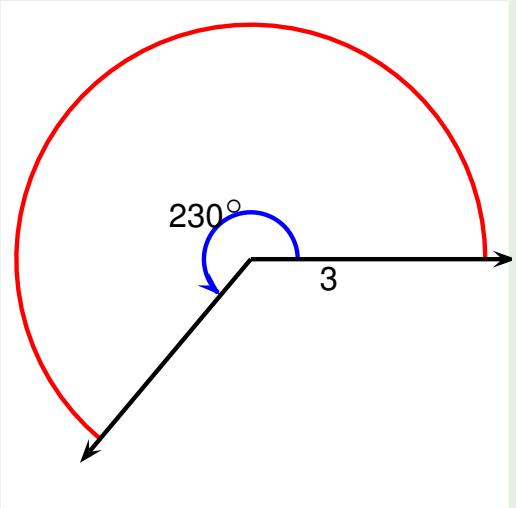


Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

$$\alpha = 230^\circ$$

$$\text{arc-length} = \alpha r = \textbf{?} \qquad \cdot 3$$

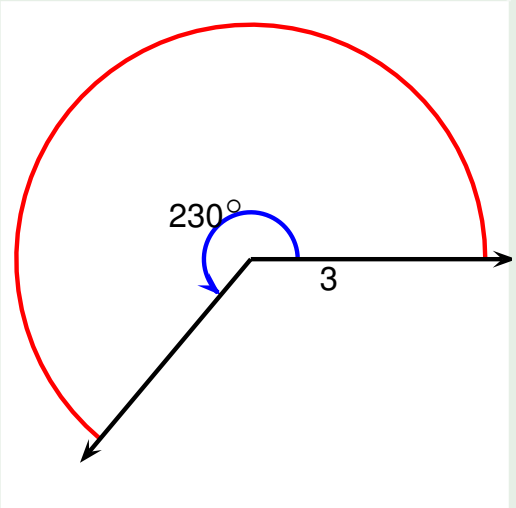
Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

$$\begin{aligned} \alpha &= 230^\circ \\ &= \textbf{?} \qquad \text{Convert to radians} \\ \text{arc-length} &= \alpha r = \textbf{?} \qquad \cdot 3 \end{aligned}$$

Example

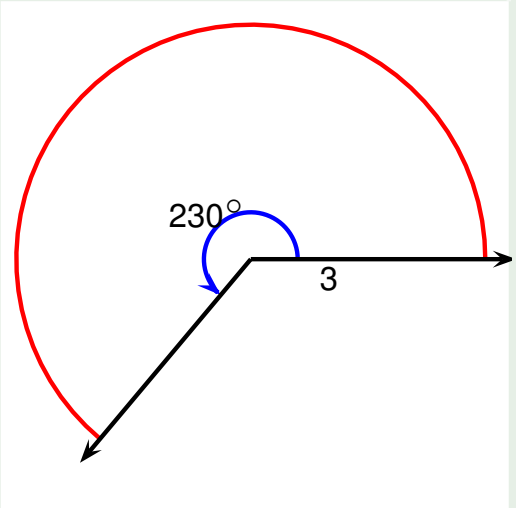


Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

$$\begin{aligned} \alpha &= 230^\circ \\ &= 230^\circ \frac{\pi \text{ rad}}{180^\circ} \\ \text{arc-length} &= \alpha r = \textbf{?} \qquad \cdot 3 \end{aligned}$$

Convert to radians

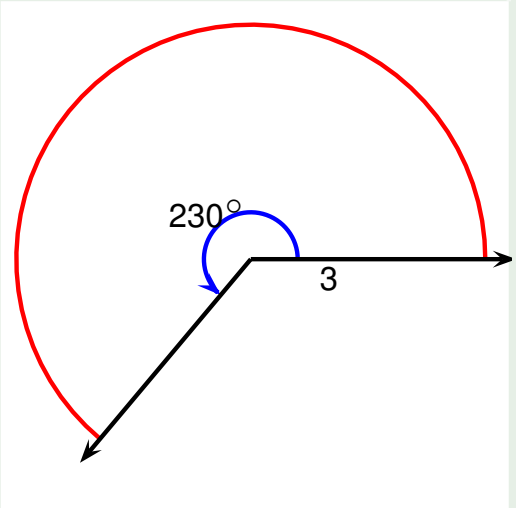
Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

$$\begin{aligned} \alpha &= 230^\circ \\ &= 230^\circ \frac{\pi \text{ rad}}{180^\circ} = \frac{23}{18}\pi \text{ rad} \qquad \left| \text{ Convert to radians} \right. \\ \text{arc-length} &= \alpha r = \textbf{?} \qquad \cdot 3 \end{aligned}$$

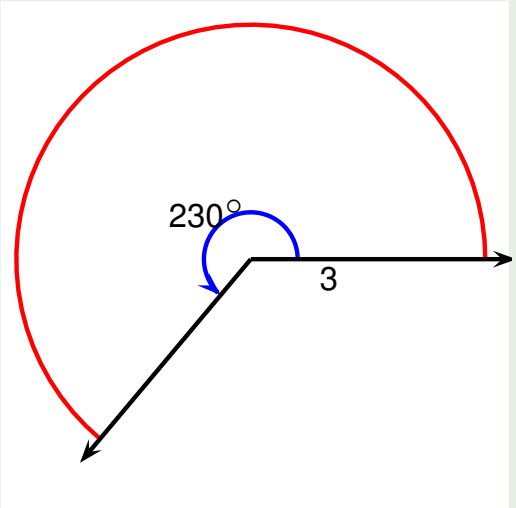
Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

$$\begin{aligned} \alpha &= 230^\circ \\ &= 230^\circ \frac{\pi \text{ rad}}{180^\circ} = \frac{23}{18}\pi \text{ rad} \qquad \left| \text{ Convert to radians} \right. \\ \text{arc-length} &= \alpha r = \frac{23\pi}{18} \cdot 3 \end{aligned}$$

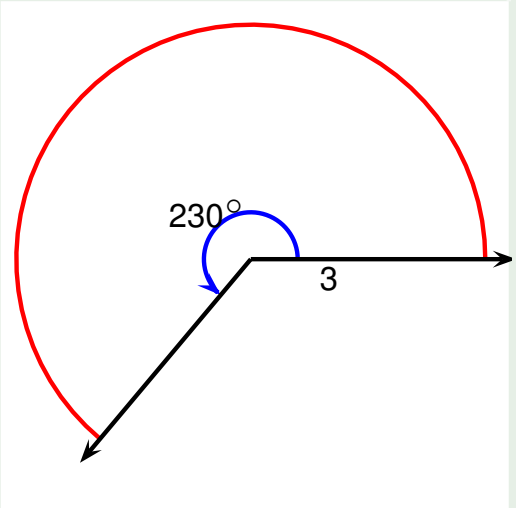
Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

$$\begin{aligned} \alpha &= 230^\circ \\ &= 230^\circ \frac{\pi \text{ rad}}{180^\circ} = \frac{23}{18}\pi \text{ rad} \qquad \left| \text{ Convert to radians} \right. \\ \text{arc-length} &= \alpha r = \frac{23\pi}{18} \cdot 3 = \frac{23\pi}{6} \end{aligned}$$

Example



Find the length of an arc of a circle of radius 3 cut off by an angle of measure 230°.

$$\begin{aligned} \alpha &= 230^\circ \\ &= 230^\circ \frac{\pi \text{ rad}}{180^\circ} = \frac{23}{18}\pi \text{ rad} \quad \Big| \text{ Convert to radians} \\ \text{arc-length} &= \alpha r = \frac{23\pi}{18} \cdot 3 = \frac{23\pi}{6} \approx 12.043 \end{aligned}$$
