$$x = \frac{-(-25) \pm \sqrt{25^2 - 4 \cdot 1 \cdot 156}}{2 \cdot 1}$$

$$= \frac{25 \pm \sqrt{625 - 624}}{2}$$

$$= \frac{25 \pm 1}{2} = \begin{cases} \frac{25+1}{2} = 13 \\ \frac{25-1}{2} = 12 \end{cases}$$

$$y = 25 - x = \begin{cases} 25 - 13 = 12 \\ 25 - 12 = 13 \end{cases}$$

The two solution candidates are  $x = 12, y = 13$  and  $x = 13, y = 12$ .

## Example

The sum of two numbers  $x$  and  $y$  is 25 and the sum of their squares is 313. Given that  $y \geq x$ , find  $x$  and  $y$ .

$$x + y = 25 \quad | \text{Solve for } y$$

$$y = 25 - x$$

$$x^2 + y^2 = 313$$

$$x^2 + (25 - x)^2 = 313$$

$$x = \frac{-(-25) \pm \sqrt{25^2 - 4 \cdot 1 \cdot 156}}{2 \cdot 1}$$

$$= \frac{25 \pm \sqrt{625 - 624}}{2}$$

$$= \frac{25 \pm 1}{2} = \begin{cases} \frac{25+1}{2} = 13 \\ \frac{25-1}{2} = 12 \end{cases}$$

$$y = 25 - x = \begin{cases} 25 - 13 = 12 \\ 25 - 12 = 13 \end{cases}$$

The two solution candidates are  $x = 12, y = 13$  and  $x = 13, y = 12$ . Since  $y \geq x$ , one of the solutions needs to be discarded and our final answer is  $x = 12, y = 13$ .
