## Reference: Summation formulas related to limits of Riemann Sums

Todor Milev

2019

The following **power sums** will be useful in what follows:

$$① \sum_{i=1}^n i = \frac{n(n+1)}{2}$$

The following **power sums** will be useful in what follows:

$$① \sum_{i=1}^n i = \frac{n(n+1)}{2}$$

$$② \sum_{i=1}^n i^2 = \frac{n(n+1)(2n+1)}{6}$$

The following **power sums** will be useful in what follows:

$$① \sum_{i=1}^n i = \frac{n(n+1)}{2}$$

$$② \sum_{i=1}^n i^2 = \frac{n(n+1)(2n+1)}{6}$$

$$③ \sum_{i=1}^n i^3 = \left[ \frac{n(n+1)}{2} \right]^2$$
