

Precalculus

The inequality $a^x \geq A$, part 2.

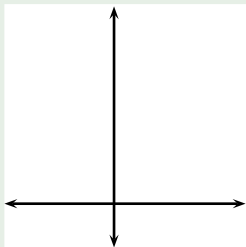

Todor Milev

2019

Example

Solve the inequality.

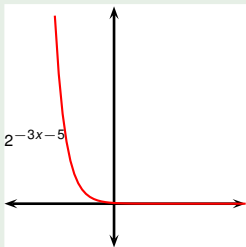

$$2^{-3x-5} < 7$$

Example

Solve the inequality.

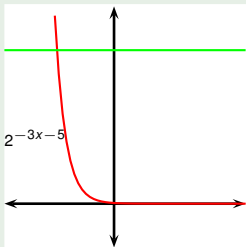

$$2^{-3x-5} < 7$$

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

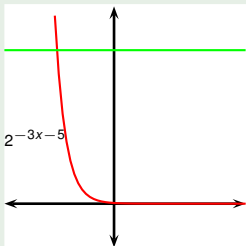

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

Logarithms preserve
inequalities: apply \log_2

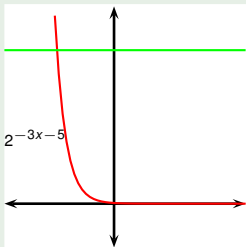

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

Logarithms preserve
inequalities: apply \log_2

Example

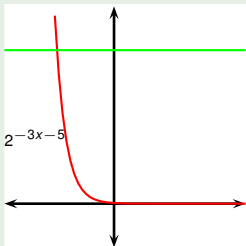

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

$$-3x - 5 < \log_2 7$$

Logarithms preserve
inequalities: apply \log_2

Example

Solve the inequality.

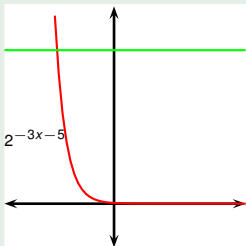

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

$$-3x - 5 < \log_2 7$$

$$-3x < \log_2 7 + 5$$

Logarithms preserve
inequalities: apply \log_2

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

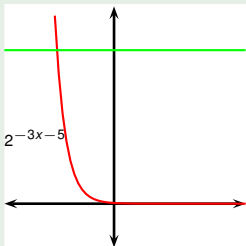

$$-3x - 5 < \log_2 7$$

$$-3x < \log_2 7 + 5$$

$$x > -\frac{\log_2 7 + 5}{3}$$

Logarithms preserve inequalities: apply \log_2

Division by negative number flips inequalities

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

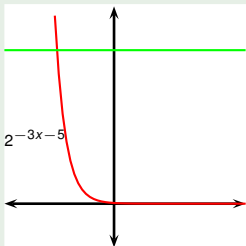

$$-3x - 5 < \log_2 7$$

$$-3x < \log_2 7 + 5$$

$$x > -\frac{\log_2 7 + 5}{3}$$

Logarithms preserve inequalities: apply \log_2

Division by negative number flips inequalities

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

$$-3x - 5 < \log_2 7$$

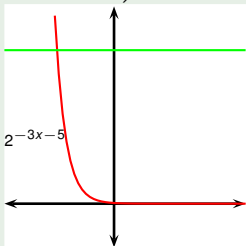

$$-3x < \log_2 7 + 5$$

$$x > -\frac{\log_2 7 + 5}{3}$$

$$x \in \left(-\frac{5 + \log_2 7}{3}, \infty \right)$$

Logarithms preserve inequalities: apply \log_2

Division by negative number flips inequalities

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

$$-3x - 5 < \log_2 7$$

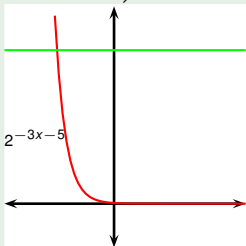

$$-3x < \log_2 7 + 5$$

$$x > -\frac{\log_2 7 + 5}{3}$$

$$x \in \left(-\frac{5 + \log_2 7}{3}, \infty \right)$$

Logarithms preserve inequalities: apply \log_2

Division by negative number flips inequalities

Example

Solve the inequality.

$$2^{-3x-5} < 7$$

$$\log_2 2^{-3x-5} < \log_2 7$$

$$-3x - 5 < \log_2 7$$

$$-3x < \log_2 7 + 5$$

$$x > -\frac{\log_2 7 + 5}{3}$$

$$x \in \left(-\frac{5 + \log_2 7}{3}, \infty \right)$$

Logarithms preserve inequalities: apply \log_2

Division by negative number flips inequalities
