# Proving Pythagorean identity with angle sum formulas

Todor Milev

2019

Recall the angle sum formula  $\cos(\alpha + \beta) = \cos \alpha \cos \beta - \sin \alpha \sin \beta$ .

### Example

Show that the Pythagorean identity  $\sin^2 \theta + \cos^2 \theta = 1$  follows from the angle difference formula.

Recall the angle sum formula  $\cos(\alpha + \beta) = \cos \alpha \cos \beta - \sin \alpha \sin \beta$ .

### Example

Show that the Pythagorean identity  $\sin^2 \theta + \cos^2 \theta = 1$  follows from the angle difference formula.

$$\begin{aligned} 1 &= \cos 0 \\ &= \cos(\theta - \theta) \\ &= \cos \theta \cos \theta + \sin \theta \sin \theta \\ &= \cos^2 \theta + \sin^2 \theta, \end{aligned}$$

as desired.
