- Let R be a rational function in two variables.

- Let R be a rational function in two variables.
- So far, with linear transformations we converted all integrals of the form $\displaystyle\int R(x, \sqrt{ax^2+bx+c})\mathrm{d}x$ to one of the three forms: $\int R(x, \sqrt{x^2+1})\mathrm{d}x$, $\int R(x, \sqrt{-x^2+1})\mathrm{d}x$, $\int R(x, \sqrt{x^2-1})\mathrm{d}x$.

- Let R be a rational function in two variables.
- So far, with linear transformations we converted all integrals of the form $\displaystyle\int R(x, \sqrt{ax^2+bx+c})\mathrm{d}x$ to one of the three forms:
  $\int R(x, \sqrt{x^2+1})\mathrm{d}x$, $\int R(x, \sqrt{-x^2+1})\mathrm{d}x$, $\int R(x, \sqrt{x^2-1})\mathrm{d}x$.
- Each of the above integrals can be transformed to a rational trigonometric integral using 3 pairs of substitutions:
  $x = \tan\theta$, $x = \cot\theta$; $x = \sin\theta$, $x = \cos\theta$; $x = \csc\theta$, $x = \sec\theta$.

- Let R be a rational function in two variables.
