## Calculus II Weierstrass substitution, part 2

**Todor Miley** 

2019

## Example

Let 
$$\theta = 2 \arctan t$$
,  $\cos \theta = \frac{1 - t^2}{1 + t^2}$ ,  $\sin \theta = \frac{2t}{1 + t^2}$ ,  $Z = \frac{3}{\sqrt{5}} (t + \frac{1}{3})$ .

$$\int \frac{d\theta}{2\sin\theta - \cos\theta + 5} = \int \frac{2dt}{(1+t^2)\left(2\frac{2t}{t^2+1} - \frac{(1-t^2)}{1+t^2} + 5\right)}$$

$$= \int \frac{2dt}{6t^2 + 4t + 4}$$

$$= \int \frac{dt}{3t^2 + 2t + 2}$$
(complete square)
$$= \int \frac{dt}{3\left(t^2 + 2t\frac{1}{3} + \frac{1}{9} - \frac{1}{9} + \frac{2}{3}\right)}$$

$$= \frac{1}{3} \int \frac{dt}{(t+\frac{1}{3})^2 + \frac{5}{9}}$$

$$= \frac{1}{3} \int \frac{dt}{\frac{9}{5}\left(\frac{9}{5}\left(t + \frac{1}{3}\right)^2 + 1\right)}$$

## Example

Let 
$$\theta = 2 \arctan t$$
,  $\cos \theta = \frac{1 - t^2}{1 + t^2}$ ,  $\sin \theta = \frac{2t}{1 + t^2}$ ,  $z = \frac{3}{\sqrt{5}} (t + \frac{1}{3})$ .

$$\int \frac{\mathrm{d}\theta}{2\sin\theta - \cos\theta + 5} = \frac{1}{3} \int \frac{\mathrm{d}t}{\frac{5}{9} \left(\frac{9}{5} \left(t + \frac{1}{3}\right)^2 + 1\right)}$$

$$= \frac{3}{5} \int \frac{\frac{\sqrt{5}}{3} \mathrm{d} \left(\frac{3}{\sqrt{5}} \left(t + \frac{1}{3}\right)\right)}{\left(\left(\frac{3}{\sqrt{5}} \left(t + \frac{1}{3}\right)\right)^2 + 1\right)}$$

$$= \frac{\sqrt{5}}{5} \int \frac{\mathrm{d}z}{z^2 + 1}$$

$$= \frac{\sqrt{5}}{5} \arctan z + C$$

$$= \frac{\sqrt{5}}{5} \arctan \left(\frac{3}{\sqrt{5}} \left(t + \frac{1}{3}\right)\right) + C$$

$$= \frac{\sqrt{5}}{5} \arctan \left(\frac{3}{\sqrt{5}} \left(\tan \left(\frac{\theta}{2}\right) + \frac{1}{3}\right)\right) + C$$
