Calculus II Inverse trig and special angles

Todor Milev

2019

Observation

- arcsin y = the appropriate angle whose sine equals y.
- Important: the output angle must lie in the interval $\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]$.

Example

Find
$$\arcsin\left(\frac{1}{2}\right)$$
.

- $\sin\left(\frac{\pi}{6}\right) = \frac{1}{2}$.
- $-\frac{\pi}{2} \le \frac{\pi}{6} \le \frac{\pi}{2}$.
- Therefore $\arcsin\left(\frac{1}{2}\right) = \frac{\pi}{6}$.
