Precalculus Compute log_a via In

Todor Milev

2019

Recall that
$$\log_a(x) = \log_b x \log_a b = \frac{\log_b x}{\log_b a} = \frac{\ln x}{\ln a}$$
.

Example

Using only the In and arithmetic operations of your calculator, compute $\log_5(13)$. Confirm your answer by exponentiation.

$$\log_5(13) = \frac{\ln 13}{\ln 5} \approx \frac{2.564949357}{1.609437912} \approx 1.593693.$$

As a check of our computations, we compute by calculator: $13=5^{\log_513}\approx 5^{1.593693}\approx 13.000007508$, and our computations check out.
