## **Precalculus**

## Proving Pythagorean identity with angle sum formulas

**Todor Milev** 

2019

Recall the angle sum formula  $\cos(\alpha + \beta) = \cos \alpha \cos \beta - \sin \alpha \sin \beta$ .

## Example

Show that the Pythagorean identity  $\sin^2\theta + \cos^2\theta = 1$  follows from the angle difference formula.

Recall the angle sum formula  $\cos(\alpha + \beta) = \cos \alpha \cos \beta - \sin \alpha \sin \beta$ .

## Example

Show that the Pythagorean identity  $\sin^2\theta + \cos^2\theta = 1$  follows from the angle difference formula.

$$1 = \cos 0 
= \cos(\theta - \theta) 
= \cos \theta \cos \theta + \sin \theta \sin \theta 
= \cos^2 \theta + \sin^2 \theta,$$

as desired.
