Precalculus

Compute the trigonometric functions in a right angle triangle, part 1

Todor Milev

2019

Example

³ Let the angle θ be as indicated in the figure. Find the values of the six trigonometric functions of θ .

To find the trigonometric functions, we need to know the length of the hypotenuse.

hypotenuse =
$$\sqrt{4^2 + 3^2} = \sqrt{25} = 5$$
.

Using the right angle triangle ratio interpretations of the trig functions, we can compute:

$$\sin \theta = \frac{3}{5} \quad \cos \theta = \frac{4}{5} \quad \tan \theta = \frac{3}{4}$$
$$\csc \theta = \frac{5}{3} \quad \sec \theta = \frac{5}{4} \quad \cot \theta = \frac{4}{3}$$
