## Precalculus Inverse trig and special angles

**Todor Miley** 

2019

## Observation

- arcsin y = the appropriate angle whose sine equals y.
- Important: the output angle must lie in the interval  $\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]$ .

## Example

Find 
$$\arcsin\left(\frac{1}{2}\right)$$
.

- $\sin\left(\frac{\pi}{6}\right) = \frac{1}{2}$ .
- $-\frac{\pi}{2} \le \frac{\pi}{6} \le \frac{\pi}{2}$ .
- Therefore  $\arcsin\left(\frac{1}{2}\right) = \frac{\pi}{6}$ .
