Precalculus

Simplify linear combination of logarithms using all techniques

Todor Milev

2019

Example

Compute as a rational number, without using calculator.

$$\begin{split} \log_{7}\left(24\right) + \log_{\frac{1}{7}}\left(3\right) - \log_{49}\left(64\right) &= \log_{7}\left(24\right) + \frac{\log_{7}\left(3\right)}{\log_{7}\left(\frac{1}{7}\right)} - \frac{\log_{7}\left(64\right)}{\log_{7}\left(49\right)} \\ &= \log_{7}\left(24\right) + \frac{\log_{7}\left(3\right)}{-1} - \frac{\log_{7}\left(64\right)}{2} \\ &= \log_{7}\left(24\right) - \log_{7}\left(3\right) - \frac{1}{2}\log_{7}\left(64\right) \\ \log_{a}x - \log_{a}y &= \log_{a}\left(\frac{x}{y}\right) \\ \log_{a}x^{r} &= r\log_{a}x \end{split}$$

$$= \log_{7}\left(\frac{24}{3}\right) - \log_{7}\left(64^{\frac{1}{2}}\right) \\ &= \log_{7}\left(8\right) - \log_{7}\left(\sqrt{64}\right) \\ &= \log_{7}\left(8\right) - \log_{7}\left(\sqrt{64}\right) \\ &= \log_{7}\left(8\right) - \log_{7}\left(\frac{8}{8}\right) = \log_{7}(1) = 0. \end{split}$$
[alternatively:]
$$= \log_{7}\left(\frac{8}{8}\right) = \log_{7}(1) = 0.$$
