## **Precalculus**

## Expand logarithm of multiplicative expression as sum of logarithms

**Todor Milev** 

2019

## Example

Fully expand the expression to a sum of logarithms. Your answer should not contain logarithms of products or logarithms of exponents.

$$\ln\left(\frac{y\sqrt{1+x}}{z^2}\right) = \ln\left(y\sqrt{1+x}\right) - \ln\left(z^2\right)$$

$$= \ln y + \ln\sqrt{1+x} - 2\ln z$$

$$= \ln y + \frac{1}{2}\ln(1+x) - 2\ln z$$
